Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1-656. (Cancelled)

657. (Previously Presented) The method of claim 678, further comprising drying said core

material prior to said applying.

658. (Previously Presented) The method of claim 678, further comprising drying said core

material prior to said admixing.

659. (Previously Presented) The method of claim 678, further comprising, after said coating,

curing said hydrophobic composite.

660-664. (Cancelled)

665. (Previously Presented) The method of claim 678, wherein said core material is selected

from the group consisting of a particulate material and a granulate material.

666. (Previously Presented) The method of claim 665, wherein said core material is selected

from the group consisting of sand, gravel, slag, porcelainite, dolomite, porcelain, basalt, quartz

sand, coal ash, chalk, zeolite, montmorillonite, attapulgite, flint, bentonite, perlite, mica, wood

chips, nut shells, sawdust and combinations thereof.

667. (Previously Presented) The method of claim 666, wherein said core material is quartz sand.

Serial No.: 10/563,853 Filed: March 1, 2006

Page : 3 of 8

668. (Previously Presented) The method of claim 665, wherein said core material has an average

particle size ranging between 25 millimeters and 5 microns.

669. (Previously Presented) The method of claim 678, wherein said adherent mixture further

comprises a gluing agent.

670. (Previously Presented) The method of claim 669, wherein said gluing agent is a volatile

hydrocarbon having at least 12 carbon atoms.

671. (Previously Presented) The method of claim 670, wherein said gluing agent is selected from

the group consisting of liquid asphalt, paraffin wax, beeswax, lanolin wax, linseed oil and

combinations thereof.

672. (Previously Presented) The method of claim 678, wherein said hydrophobic powder has an

average particle size ranging between 0.02 micron and 50 microns.

673. (Previously Presented) The method of claim 678, wherein said hydrophobic powder has a

surface area ranging between 1 m²/gram and 60 m²/gram.

674. (Previously Presented) The method of claim 678, wherein said hydrophobic powder further

comprises hydrophobic fumed silica.

675. (Previously Presented) The method of claim 674, wherein said hydrophobic fumed silica

constitutes between 1 and 99 weight percentages of said hydrophobic powder.

676. (Previously Presented) The method of claim 678, wherein said adherent layer constitutes

between about 0.5 and about 7 weight percentages of said hydrophobic composite.

677. (Previously Presented) The method of claim 678, wherein said hydrophobic powder

constitutes between about 0.1 and about 5 weight percentages of said hydrophobic composite.

Serial No.: 10/563,853 Filed: March 1, 2006

Page : 4 of 8

678. (Previously Presented) A method of preparing a hydrophobic composite, the method

comprising:

applying an adherent layer onto a core material;

subsequently coating said core material with a hydrophobic powder, said

hydrophobic powder including at least one impure element having a hydrocarbon chain attached

thereto, to thereby provide the hydrophobic composite,

said adherent layer bonding said hydrophobic powder to said core material,

said adherent layer comprising a water-based gluing agent and said applying

comprising admixing said core material with an aqueous adherent mixture containing said water-

based gluing agent and an aqueous solvent, while removing all of said aqueous solvent from said

mixture of said core material and said adherent mixture, to thereby provide said core material

having applied thereon said adherent layer.

679. (Previously Presented) The method of claim 678, wherein a concentration of said water-

based gluing agent in said aqueous adherent mixture ranges between about 1 weight percentage

and about 99 weight percentages.

680. (Previously Presented) The method of claim 678, wherein said aqueous solvent is water.

681. (Previously Presented) The method of claim 678, wherein removing said aqueous solvent is

performed by tumble drying.

682. (Currently Amended) The method of claim 678, further comprising, prior to said coating,

Previously Presented

admixing said core material having thereon said adherent layer with an additive selected from the

group consisting of a coloring agent, a UV resistant agent, a bleaching agent and an abrasive

agent.

683. (Previously Presented) The method of claim 678, wherein said hydrocarbon chain

comprises at least 10 carbon atoms.

Serial No.: 10/563,853 Filed: March 1, 2006

Page : 5 of 8

684. (Previously Presented) The method of claim 678, wherein said hydrocarbon chain is

covalently attached to said at least one impure element.

685. (Previously Presented) The method of claim 684, wherein said hydrocarbon chain is a

residue of a fatty acid having at least 12 carbon atoms.

686. (Previously Presented) The method of claim 685, wherein said fatty acid is selected from

the group consisting of stearic acid, lauric acid, myristic acid, palmitic acid, oleic acid, linolenic

acid and arachidonic acid.

687. (Previously Presented) The method of claim 678, wherein said at least one impure element

is selected from the group consisting of a metallic element, a semi-metallic element and a

transition metallic element.

688. (Previously Presented) The method of claim 678 wherein said at least one impure element is

selected from the group consisting of magnesium, calcium, aluminum, zinc, sodium, barium,

zirconium, manganese, titanium, vanadium, chromium, iron and combinations thereof.

689. (Previously Presented) The method of claim 678, wherein said hydrophobic powder has an

average particle size ranging between 0.02 micron and 50 microns.

690. (Previously Presented) The method of claim 678, wherein said hydrophobic powder has a

surface area ranging between 1 m²/gram and 60 m²/gram.

691. (Previously Presented) The method of claim 678, wherein said hydrophobic powder is

calcium stearate.
